Custom Sounds

Custom Sounds For iPhone

In this tutorial you will teach you how to create custom sounds and tones for your iPhone. Your phone has to be Jailbroken with winterboard installed.

Step 1:

Download [WINS CP](#)
Download [iTunnel](#)
Download wavepad (<http://www.nch.com.au/wavepad/masters.html>)
On your iPhone search cydia for *OpenSSH*, download and install this software. Install each software.

Step 2:

Go into Folder Options and *uncheck* "Hide Extensions for known file types"

Step 3:

Create a folder with the name "Trick Digest.theme" this name can be anything, but with the .theme extension. In the theme folder create another folder with the name UI Sounds. The name is important it has to be exact. Don't worry about the wallpaper and icon files.

Now Open wave pad

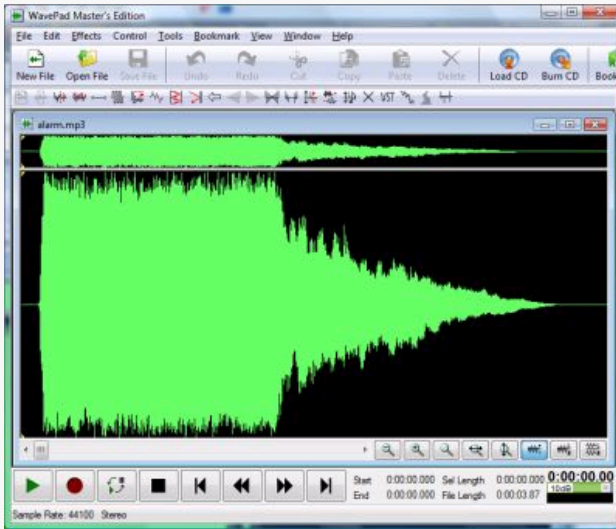

Do a search on google for your favorite tone. You can try

<http://www.flashkit.com>

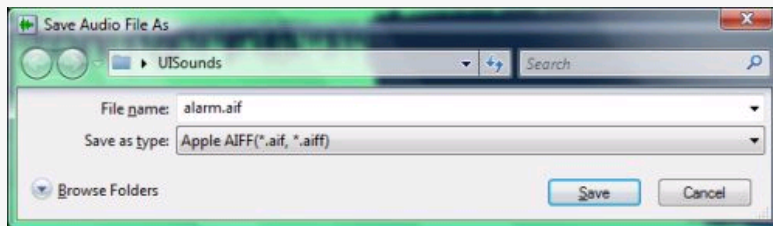

<http://www.zedge.net>

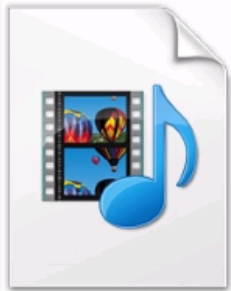

For this tutorial i created a [zip](#) file with the tones, download this pack. When you open it you will see the files shown above. These have to be converted using WavePad into an apple format .aif or .aiff.

With WavePad open, Open one of the tone files. Click File > Open Audio File and browse to the UI Sounds folder. When you open the tone you will see the window above. Click File > Save File As

Save the file as Apple AI FF.

alarm.aif

You will need to rename this file to alarm.caf as shown below.

alarm.caf

Do this to each of the audio files.

alarm - This is your Calendar Alerts

Tock - Keyboard Click Sounds

lock - This is your lock sound

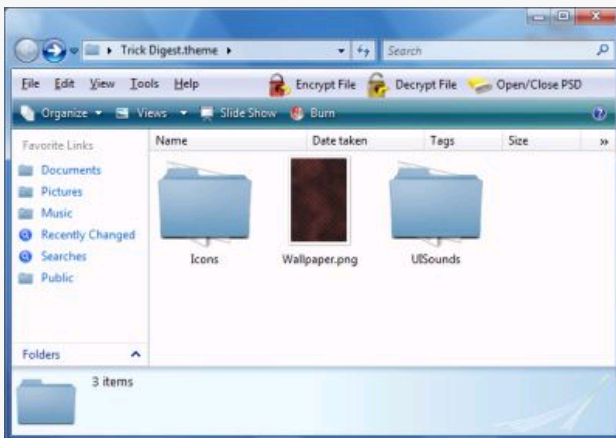

unlock - Unlock Sound

Voicemail - Voice mail sound

mail-sent - Tone for sent mail

new-mail - New mail tone

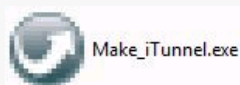

beep-beep - This is the tone when you plug the charger USB cable in.

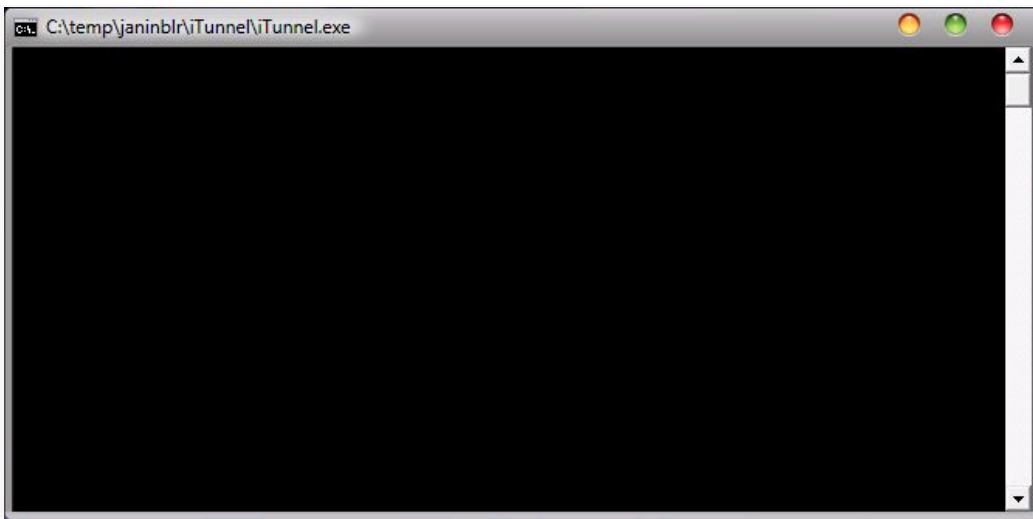

Remember you have to place the files inside the UISounds folder located in the .theme folder we created earlier.

Step 4:

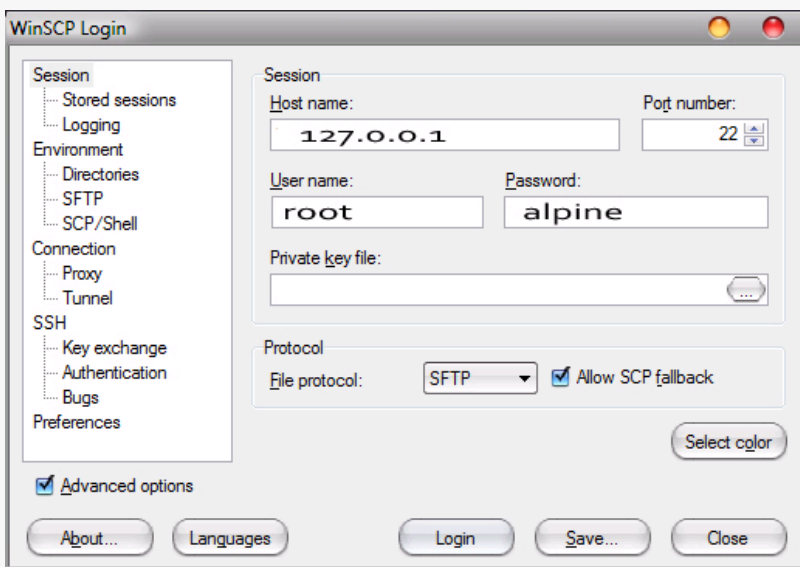

Open and run Make iTunnel

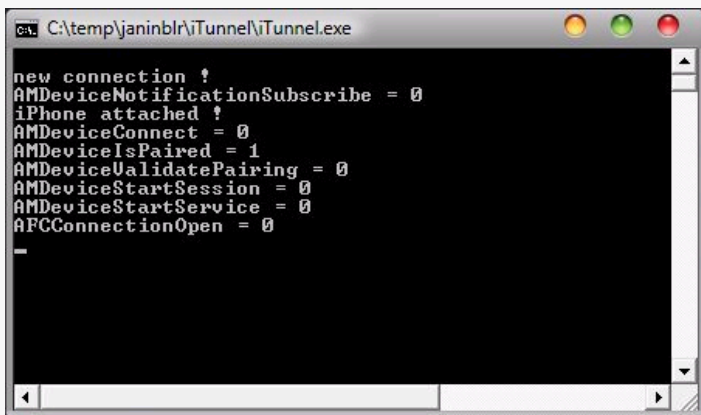

When you open the iTunnel window all you will see is the dos screen below.

With that window still open, Open and run winscp. Connect your iphone using the usb cable. In Winscp fill in the information shown below.

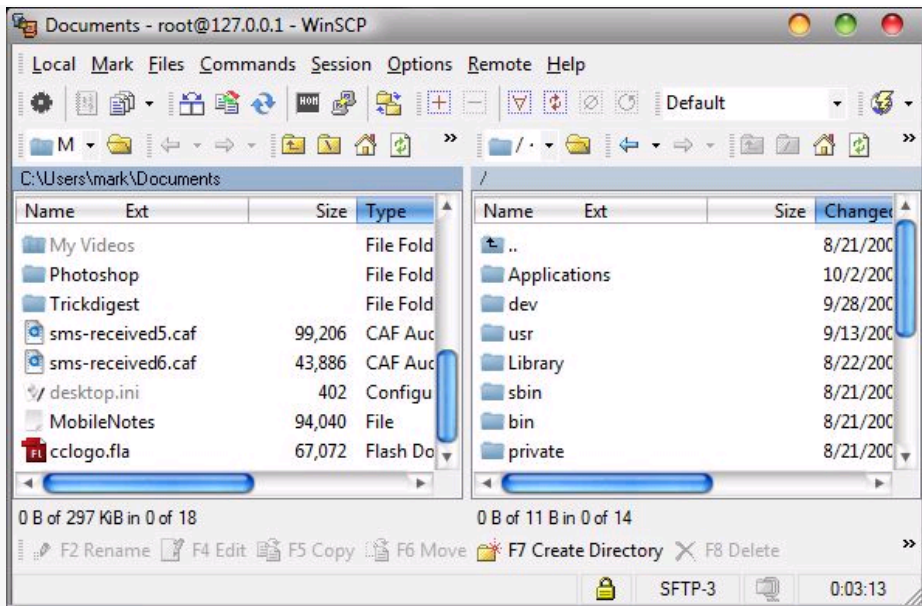

Click Login, when you click login you will see the window

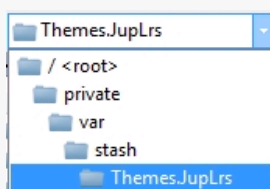

Step 5:

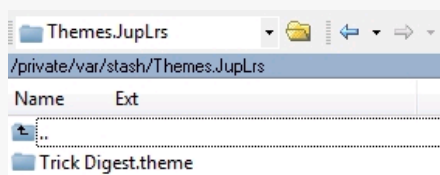

After doing that you will see the window below, if you ssh into your iphone before using wifi you will recognize this window.

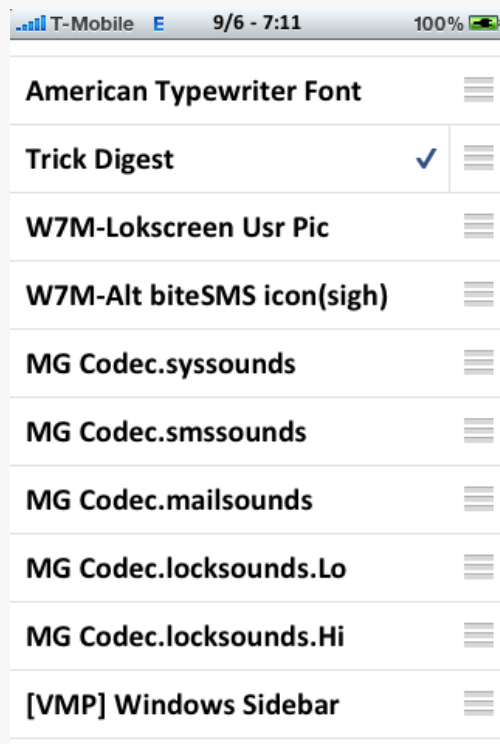

Browse to the folder below.

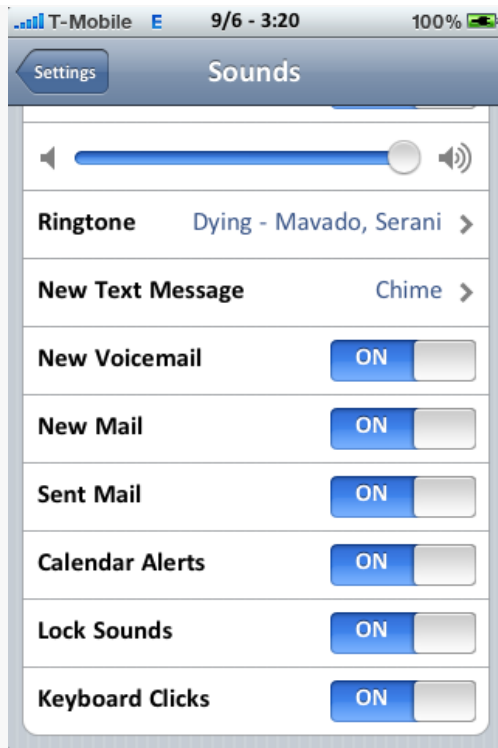

Place the Trick Digest.theme folder inside the Themes.JupLrs folder as shown below.

After placing the Trick Digest.theme folder inside the Themes.JupLrs folder, on the iPhone go into winderboard and uncheck and check the theme you have selected. This will reload the theme and your new icons will be visable.

With that go into Setting > Sounds and test the new tones.

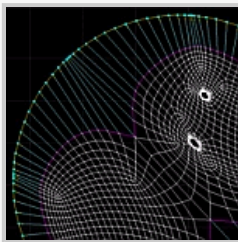

Finished, Need help or have questions feel free to [contact us](#).
